

Business Architecture Planning

Solution Overview

Change is necessary in today's business environment. Effective change management calls for the alignment of business requirements with the underlying systems and technology that deliver your organization's business solutions. Keypoint's Business Architecture Planning can help your organization plan and manage corporate change so that all business activities support your corporate goals and strategies.

Business Needs

Due to rapid growth, M&A activity or the limited availability of qualified leadership:

- Systems are not integrated
- There is a significant amount of redundant data entry
- Departments operate as business silos, making information inconsistent or unreliable
- Systems development and maintenance cannot be tied to operational efficiency improvements or customer satisfaction
- Economies of scale are not being realized due to overlap and redundancy

Business Solutions

Keypoint can work with your organization to develop a transformation roadmap using Keypoint's Business Architecture Planning (BAP) methods and our StartPoint® Solutions Framework. These proprietary tools and techniques provide a framework for transforming your organizations' structure, workflow and technology to support your business strategy and goals.
